23. Problem: (use additional Sheets if necessary) Only one Report Writer product is needed to meet current level 3 and 4 requirements. Two Report Writer products are currently baselined and both meet the current Report Writer requirements: IQ and SQR. DAACs and DDM have provided feedback via CUT meeting action items that neither product is used by the DAACs. One Report Writer product should be removed to conserve resources since two products are not needed.. Other baseline changes are needed and detailed on attached sheet.						
24. Proposed Solution: (use additional sheets if necessary) Remove IQ from the baseline because there is no current or planned version that will be certified for Solaris 8 and Sybase ASE 12/12.5. SQR (Brio Report) has a version which is certified for Solaris 2.5.1 and Solaris 8 and Sybase Open Client 11.1.1 and 12, which can communicate with Sybase ASE 12.0 and 12.5. Removal instructions are provided in 914-TDA-120 (Intelligent Query and IQ Access 5.5.0.1 for the ECS Project:: B.1.2: Uninstall instructions. Other baseline changes are needed and detailed on attached sheet.						
25. Alternate Solution: (use additional sheets if necessary) None						
26. Consequences if Change(s) are not approved: (use additional sheets if necessary) Potential Solaris 8 schedule impact if delivery of this product needed. No delivery date has been identified..

Title of Change: IQ Baseline Removal and Baseline Updates

Baseline Updates:

1. Add F (Freeware) code to Acrobat Reader for PC and Apache Server 1.3.9
2. Remove SQL Server Monitor Client/Svr version 11.5.1 for SGI. All SGIs Should be at 11.9.3.
3. Remove Sybase Adaptive Svr Enterprise version 11.5.1.2 for SGI. All SGIs Should be at 11.9.3.
4. Remove SQL Server Monitor Client/Svr from g0mss20 baseline. SQL Server Monitor Client/Svr is not baselined without Sybase ASE. Although xxmss20 has been identified as the Dashboard Application Server, GSFC has identified that this is currently installed on g0ais06. Therefore neither SQL Server Monitor Client/Svr or Sybase Adaptive Svr Enterprise should be baselined for this machine.

5. Remove:

FDDI Module PROM

FDDI Module RunTime

Packet Engine PROM

Packet Engine Runtime

from Fore Systems. These have been gradually been replaced by the CISCO Catalyst devices. The last removal from LARC has been confirmed.

System Administrator Updates:

Update hosts as identified in ECOs.
