**Title of Change:** Deliver EDGRS Release 3.03.02 to all DAACs

Attached is a tar/Winzip file containing two replacement scripts to patch Release 3.03 to 3.03.02

This patch corrects an error in the previous patch to address expanded definitions in the Event History table extractions that were not known at the time of Release 3.03. It also expands a field in the data pool data extraction to avoid possible truncation.

To install this patch, simply replace the scripts with the files of the same name after properly backing up the original scripts in case of the need to revert.

Backfills will be requested from the Points of Contact after the patch has been installed.

As before, it is now in tar files created on the GDAAC machine.
